Leonid Trofymchuk

Senior Software Engineer · TypeScript · React · GraphQL · Frontend Architecture

Riga, Latvia · +371 26967965 · stesel23@gmail.com · linkedin.com/in/leonidtrofymchuk · stesel.netlify.app · docinspector.ai

SUMMARY

Senior Software Engineer with 15 years of experience building web applications, from real-time live casino games to enterprise cloud software. At Workday, I work on frontend architecture for enterprise applications: modernizing legacy code to TypeScript and GraphQL, improving accessibility of shared UI components, and keeping large dependency trees secure.

Previously spent 9 years on Evolution live casino games, growing from Flash developer to JavaScript Lead Engineer of a 5–6 person team, and leading the migration of games from Flash to HTML5. Founder of DocInspector, an AI-powered legal document analysis SaaS built end to end with Next.js, MongoDB, Stripe and OpenAI APIs. Daily user of AI coding tools (Cursor, Claude Code, Codex) and context engineering.

SKILLS

Languages	TypeScript, JavaScript (ESNext), HTML5, CSS3, Rust (exploring)
Frontend	React, Next.js, React Context, Redux, MobX, Vite
APIs & data	GraphQL (Apollo), REST, WebSockets, WebRTC, MongoDB
Graphics & performance	Canvas, WebGL, WebGPU, PixiJS, GreenSock
Testing & quality	Jest, Selenium, Cucumber, accessibility (WCAG)
AI & tooling	OpenAI APIs, Cursor, Claude Code, Codex, context engineering, Docker, GitLab CI, Jenkins, webpack

EXPERIENCE

Senior Software Development Engineer — Workday

Jan 2022 – Present · Riga, Latvia

Feature development and frontend architecture for Workday enterprise cloud applications.

- Led migration of legacy JavaScript to TypeScript, replacing Redux and REST with React Context and GraphQL
- Built interactive reporting features using Flexmonster and a Tableau data connector
- Designed the architecture of the company settings page; built the company profile page and the user support portal
- Improved accessibility of shared UI-library components to WCAG standards and unified their design and customization
- Own dependency management for my feature areas, keeping libraries current and applying security patches
- Maintain quality with Jest unit tests and Selenium end-to-end tests
- Use Cursor, Claude Code and Codex daily; develop AI skills and context engineering to speed up team workflows

Stack: TypeScript, React, GraphQL, Vite, Jest, Selenium

Founder & Software Engineer — DocInspector

Apr 2025 – Present · docinspector.ai

AI-powered SaaS that analyzes legal documents: extracts key points, flags legal risks and summarizes contracts in seconds.

- Built and launched the product end to end, from AI/NLP integration to frontend UX, payments and cloud deployment
- Designed review workflows that cut manual contract analysis time for legal and compliance users
- Bootstrapped the MVP and drove early traction with legal and compliance professionals

Stack: Next.js, TypeScript, MongoDB, Stripe, OpenAI APIs

JavaScript Lead Engineer — Evolution Gaming Mar 2020 – Mar 2022 · Riga, Latvia

Technical lead for a team of 5–6 frontend engineers building high-performance live casino games with real-time video streams, rich animations and design-heavy UIs on desktop and mobile browsers.

- Set technical direction for the team: architecture decisions, code quality standards and implementation approaches
- Mentored junior and mid-level engineers and assessed their growth toward higher seniority levels
- Interviewed engineering candidates regularly, often several per week
- Reviewed pull requests and evaluated solutions for performance, maintainability and quality
- Turned product requirements into engineering tasks and coordinated delivery with product managers and designers

JavaScript Developer — Evolution Gaming Jun 2016 – Mar 2020 · Riga, Latvia

- Migrated live casino games from Flash to HTML5/JavaScript, moving business logic from Robotlegs to Redux and MobX
- Built real-time game clients combining live video (WebRTC), WebSocket messaging and Canvas/WebGL animation, including Blackjack, Infinite Blackjack and Monopoly
- Optimized rendering and animation performance for smooth play on desktop and mobile browsers
- Developed desktop builds with NW.js

Stack: JavaScript, React, PixiJS, Canvas, WebGL, WebRTC, WebSockets, Redux, MobX, NW.js, Jest

Senior Flash Developer — Exadel (for Evolution Gaming) Feb 2013 – Jun 2016 · Ukraine / Latvia

- Developed Evolution live casino game clients in ActionScript 3 with Robotlegs, including Immersive Roulette and Baccarat Pro
- Interviewed engineering candidates

Flash Developer — Metecol (scientific research company) Sep 2011 – Feb 2013 · Ukraine

- Built Flash/AIR virtual training simulators, including a manual arc welding simulator delivered solo (development, UI design, sound)

PROJECTS & PUBLICATIONS

WebGPU performance research — exploring GPU-accelerated rendering to optimize high-load web applications and games. Articles:

- WebGPU performance — is it what we expect?
- Why is Entity Component System (ECS) so awesome for game development?
- Time travel rendering for React function components
- Animate a React component with a configurable frame rate
- String vibration physics with React

EDUCATION

Master's degree, Applied Physics
Nizhyn Gogol State University, Ukraine · 2006 – 2011

LANGUAGES

Ukrainian (native) · English (full professional) · Latvian (elementary)

CERTIFICATIONS

- Apollo Graph Developer – Associate
- Supervised Machine Learning: Regression and Classification
- Docker Essentials
